

Profile Summary

Dedicated 28-year-old network engineer in Bandung, West Java, with 12 years of versatile experience. Specialized in data centers, excelling in collaborative and independent tasks. Proficient in managing data storage, networking. Skilled in implementing virtualization technologies and ensuring system scalability. Expertise includes configuring Cisco and Mikrotik routers, with a deep understanding of network protocols.

Adept at utilizing virtualization platforms such as VMware for efficient resource allocation. Experienced in implementing and managing storage solutions like EMC. Continuously expanding knowledge through self-driven learning initiatives.

Passionate about photography and read book about technology, reflecting a holistic approach to personal and professional development. Known for a strong work ethic, adaptability, and the ability to contribute effectively to team projects or work independently. Enthusiastic supporter of Real Madrid and Persib Bandung.

Education

November 2014 - November 2017

STMIK Indonesia Mandiri Bandung

Informatics Engineering

GPA : 3,25 / 4

Bachelor of Computer Science

July 2009 - June 2012

Angkasa 1 Margahayu Vocational High School

Computer and Network Engineering

GPA : 7 / 10

Work Experience

February 2020 - Until Now

Information Technology Operations Support • PT. ValueStream International

- Check and maintain Data Center electricity.
 - Checking UPS for electricity backup if PLN goes out.
 - Generator maintenance starts from checking generator indications
 - Warm up the generator once a week
 - If the UPS / Genset is damaged, a follow up will be carried out with the partner / vendor who handles the UPS / Genset
- Monitoring and troubleshoot modem SMS center for OTP
- Monitoring Biller, Partner, Tax and Internet Links. If a link down occurs, a follow up will be carried out with the relevant parties
- Monitoring all Data Center devices such as Server, Storage, UPS, Router, Switch, DSB Cabling
- Data Center room temperature monitoring. If an AC temperature warning occurs, a temperature adjustment is made. If the AC is indicated to be damaged, a follow up is carried out with the partner/vendor who handles the AC.
- Installation & configuration of both physical and Virtual (VM) servers
- Installation & Configuration of Switch, Router & Modem Devices
- Office Wifi (LAN) Configuration
- Monitoring the Web Domain used by transactions.
- monitor goods or people entering and leaving the data center and netroom.
- carry out routine records of disturbances, kWh, generator, AC, incoming and outgoing goods/people and link conditions.
- Supports application, system, database and transaction problems.
- Role as 2nd level support.
- Check transaction log.
- Analysis & troubleshooting on service issues.
- Support and operate databases (Maintenance, repair, update, delete, backup).
- Record daily, monthly and weekly transactions.
- Support for reconciliation activities.
- Maintenance and support of existing services on the server.
- application installation on the production side (Implementator).
- Transaction Mapping, Service Mapping, and Service (System) Calibration.
- Analyze transaction log messages (JSON & ISO).
- Operate databases to support production activities.
- Work Instruction Writer.

April 2016 - February 2020
